

FRANCESCO LUISI

Florence, Italy ◇ (+39) 334 3413490 ◇ francescoluisi3@proton.me ◇ linkedin.com/in/francesco-luisi

M.Sc. candidate completing an Italian–German double degree in finance, with a strong quantitative background in financial risk management, interest-rate analysis and financial econometrics, specialising in volatility indices. Proficient in Python, R, MATLAB, Excel, and Bloomberg. All coursework completed; available immediately for full-time positions and flexible to relocate.

EDUCATION

HfWU Nürtingen-Geislingen University <i>M.Sc. in International Finance (Double Degree)</i> Final Coursework average: 1.2/5.0 (German grading scale: 1.0 highest), (GPA 3.9/4.0) Relevant coursework: Quantitative Risk Management, Financial Econometrics, Derivatives and Financial Engineering, Data Science in Finance.	Sept 2025 – July 2026 <i>Nürtingen, Germany</i>
University of Pisa <i>M.Sc. in Banking, Corporate Finance and Financial Markets</i> Final coursework average: 29.18/30 (GPA 3.9/4.0) Relevant coursework: Financial Risk Management, Computational Methods for Finance, Banking.	Sept 2024 – Nov 2026 <i>Pisa, Italy</i>
University of Pisa <i>B.Sc. in Banking, Finance and Financial Markets</i> Final grade: 110/110 <i>cum laude</i> (GPA 4.0/4.0).	Sept 2020 – Sept 2024 <i>Pisa, Italy</i>

QUANTITATIVE PROJECTS & RESEARCH

Master's Thesis: Incremental Predictive Content of the VVIX for VIX Forecasting	2026
- Analysing the relationship between VIX and VVIX through rolling correlations, lead–lag analysis, and Granger causality tests. - Developing and comparing HAR forecasting models with and without VVIX to assess its incremental predictive power across different market stress conditions. - Implementing the empirical analysis in Python, including data preparation, financial stress classification, model estimation, and in-sample and out-of-sample forecast evaluation.	
Yield Curve and Interest Rate Risk Analysis	2026
- Retrieved government bond yields from Bloomberg and constructed zero-coupon yield curves across different maturities in Python. - Analysed bond portfolio exposure to interest-rate movements using duration and convexity under parallel and non-parallel yield-curve shifts.	
Derivatives Pricing and Greeks Sensitivity Analysis	2025
- Implemented Black–Scholes pricing of European options in Python and Excel. - Computed key option Greeks (Delta, Gamma, Vega, Theta, Rho) and analysed hedging sensitivities under stressed spot and volatility scenarios.	
Global Volatility Indices: Cross-Market Analysis	2024
- Compared implied volatility indices across major equity markets, including the VIX (United States), VSTOXX (Europe), Nikkei Volatility Index (Japan VIX), and Nifty VIX (India VIX). - Analysed cross-market correlations and volatility dynamics under different market conditions using Python. - Examined differences in regional market responses to global financial stress and major economic events.	

CERTIFICATIONS

European Institute of Quantitative Finance (EIQF): Financial Engineer, Financial Modeler
CFA Program: Level I Candidate, planned May 2027
Bloomberg: Bloomberg Market Concepts (BMC), Finance Fundamentals, Spreadsheet Analysis, ESG

TECHNICAL SKILLS & LANGUAGES

Programming	Python (pandas, NumPy, SciPy, statsmodels, scikit-learn, Matplotlib), R, MATLAB
Quantitative Methods	Time-series econometrics (HAR models), volatility modelling, Monte Carlo simulation, model calibration and validation
Finance	Interest-rate risk, yield-curve analysis, duration and convexity, stress testing, portfolio risk analysis, derivatives pricing.
Software & Data	Excel (financial modelling), Bloomberg Terminal, LaTeX
Languages	Italian (native), English (fluent), German (intermediate), French (Basic)
